

PROJECT7_STRUCTURES_LASTNAMESECTION

filename: PROJECT7_STRUCTLASTNAMESECTION

WRITE A C PROGRAM THAT WILL IMPLEMENT C STRUCTURES

A. Define the following structures:

struct name

```
{  
    /*declare 3 variAbles for firstname, middle name and last name*/  
};
```

struct birth

```
{  
    define 3 members namely: month(char array),day(int),  
        and year (long)  
};
```

struct mysubject

```
{  
    subject(char array);  
    unit_per_subject(float)  
    finalGrade_perSubject(float);  
};
```

struct studentRec

```
{ idnumber(long)  
    students_name(struct type)  
    gender(char)  
    birthdate(struct type)  
    courseYear(char array)  
    numberOfSubjectsEnrolled(integer)  
    subject(struct mysubject)  
};
```

B. IN FUNCTION main(),

- asks for user's input in each data member defined
in structure studentRec
- Use gotoxy() to position cursor in each input label from id no.,name,birthday,gender,
course & year,total no. of subjects(a student is currently enrolled in).

Furthermore, If a user inputs(for example) 5 number of subject
subjects enrolled, cursor positions at the line below
the SUBJECT column to allow user to input a subject name,
after a user inputs a subject, cursor moves to the next column

below units to allow user to enter the no. of units per subject
and lastly the corresponding final grade in every subject.

Sample Test DAta:

~~~~~

BRIGHT UNIVERSITY  
Atlanta City

STUDENT RECORD ENTRY: <INPUT PROCESS>

I.D. number : 23-12345  
N A M E : Myrliza A. Villamor  
GENDER[M/F] : F  
BIRTHDATE : April 25, 2005  
COURSE & YR : BSIT-1

Total no. of subjects: 5 <input>

<NOTE: YOU CAN TYPE YOUR SUBJECTS CURRENTLY ENROLLED IN>

| SUBJECT     | UNIT | GRADE |
|-------------|------|-------|
| CSIT122     | 3.0  | 4.2   |
| SOCSCI012   | 3.0  | 3.8   |
| ENGL113     | 3.0  | 3.7   |
| MATH113     | 3.0  | 3.2   |
| FILIPINO112 | 4.0  | 4.0   |

- DISPLAY THE computed general point average(GPA) to the next  
line after the last subject had been entered.

For example:

After the user inputs the last subject it prints below

GPA : \_\_\_\_\_

Use the formula:

SumOfProduct += (unit\*fgrade) ;/\*use for loop\*/

GPA= sumProduct/total\_units

Press 1 to continue or 0 to exit...

~~~ ALLOW THE USER TO PROCESS AGAIN ANOTHER RECORD USING LOOP STRUCTURE  
prompt the user to press 1 to process another student record
